# LiDAR Scanning

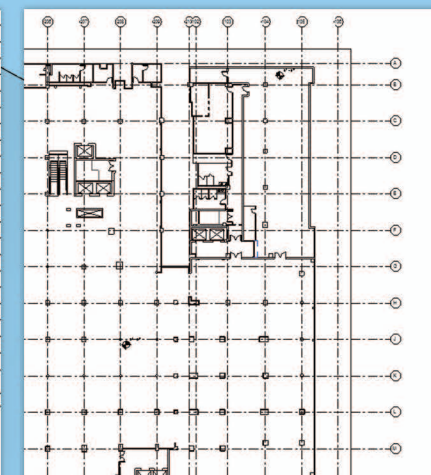

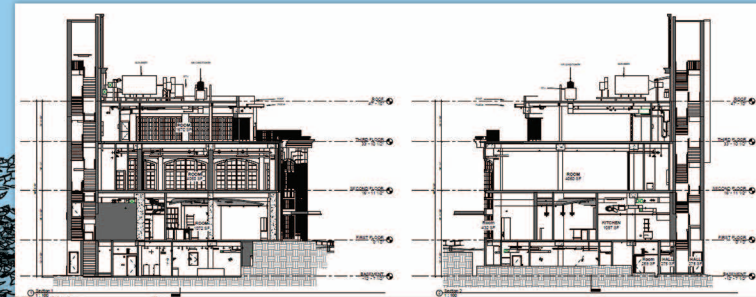

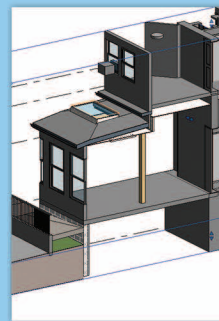

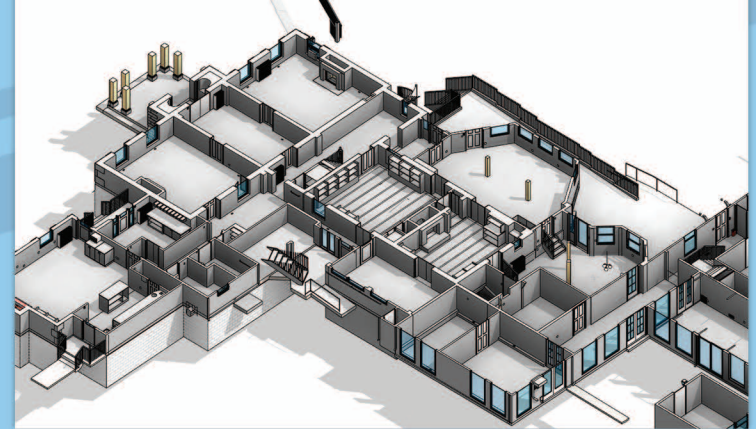

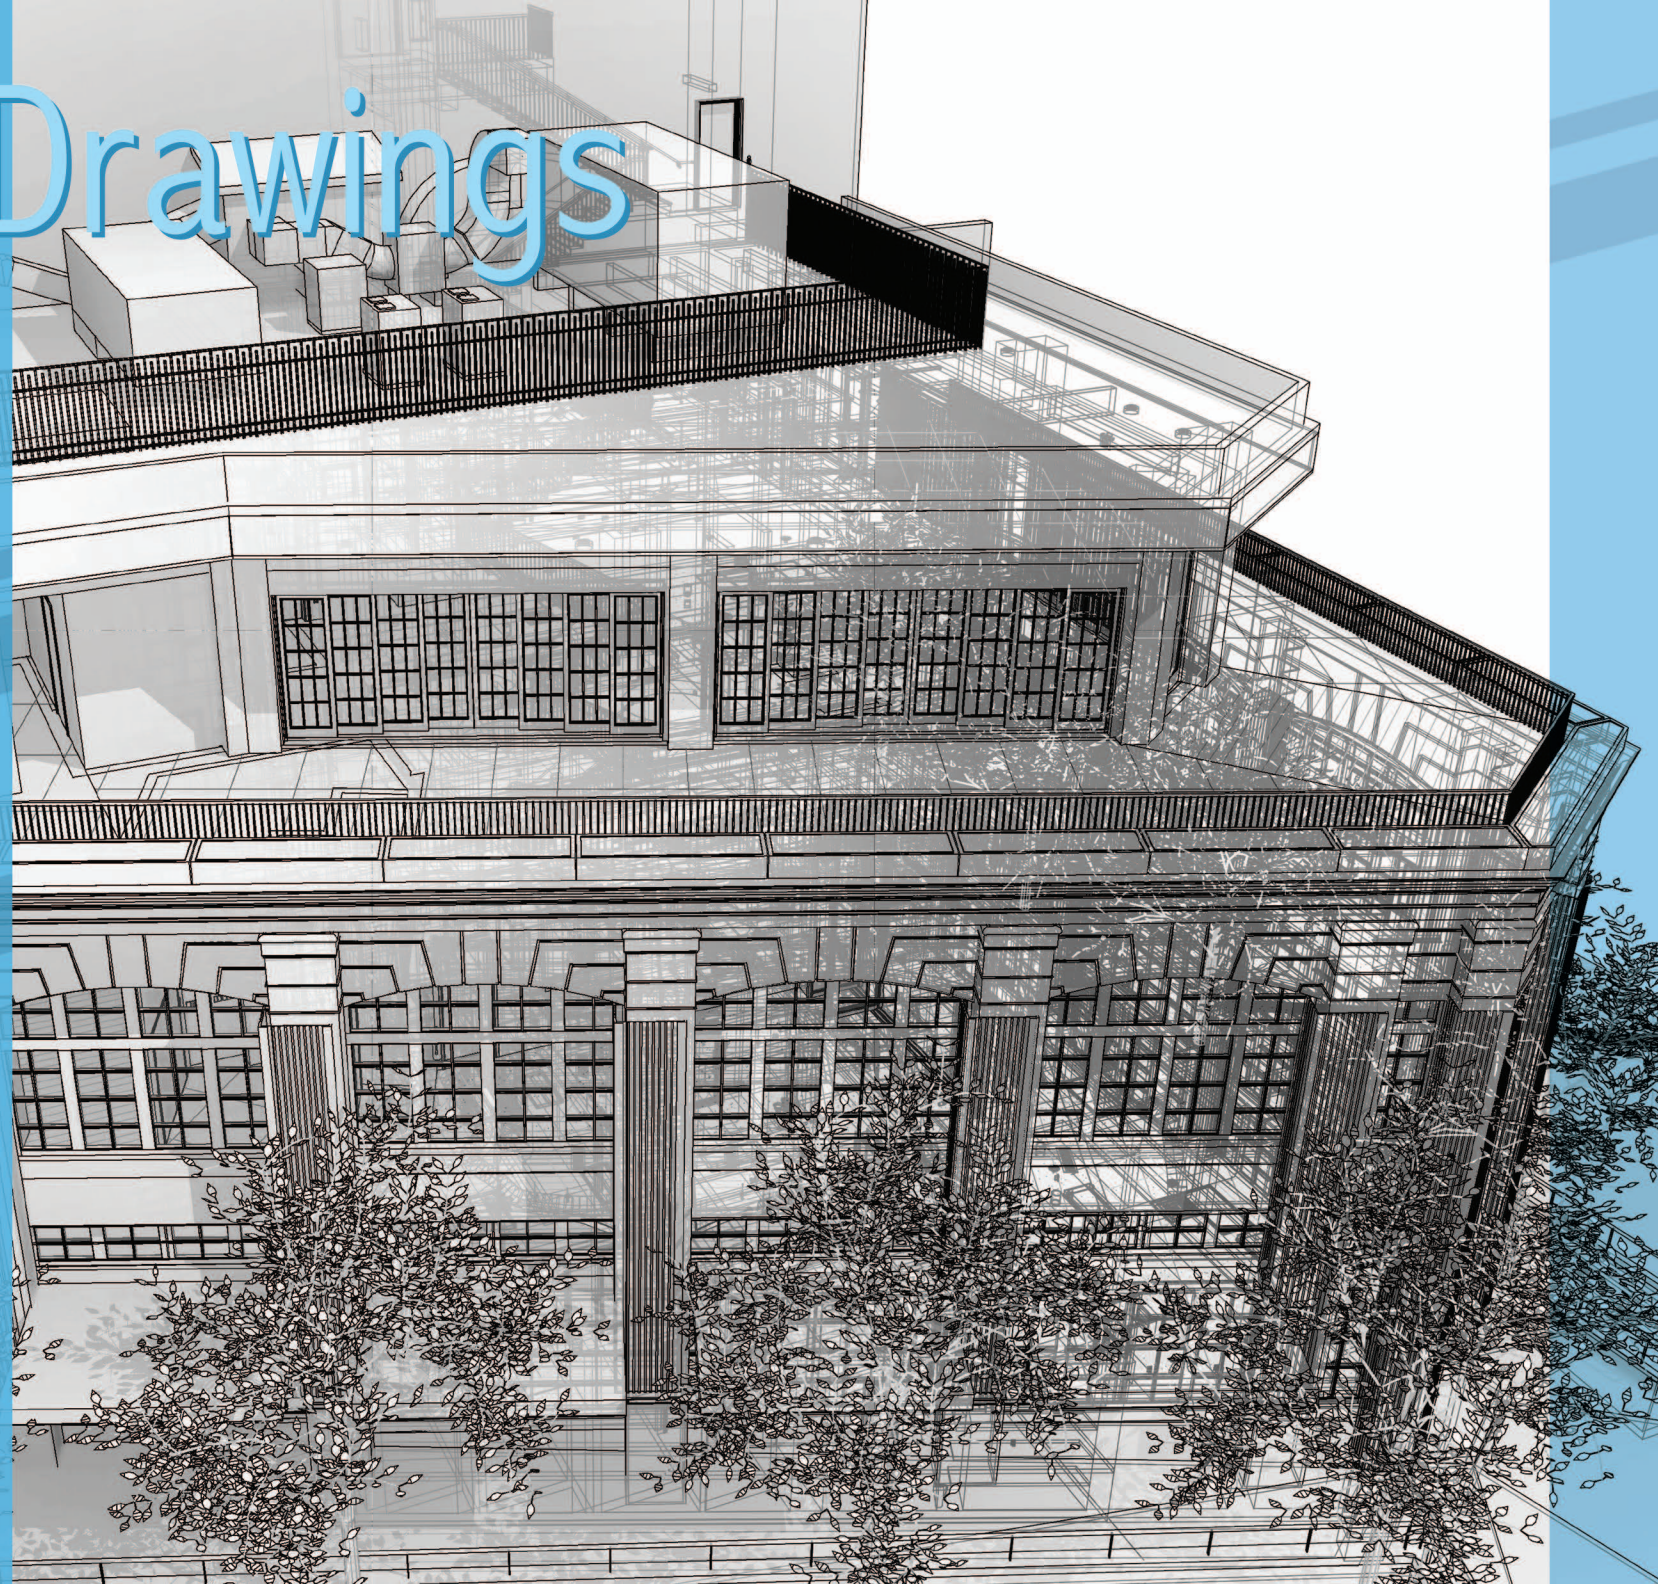

LiDAR scanning is quickly becoming more accessible and the industry standard. We believe we are the folks for just about any scanning job. We have several terrestrial scanners and mobile scanners. With these tools we can create and register 3D laser point cloud to each other.

Whether your need is audit-based, historical, or for AEC needs, our curious scanners are ready to go to work for you.

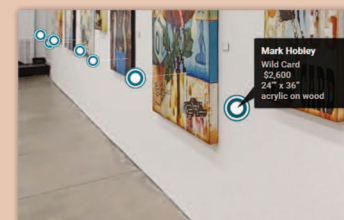

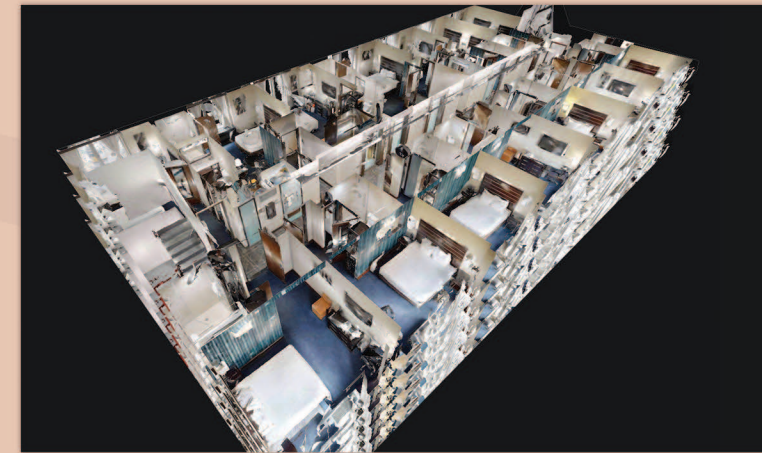

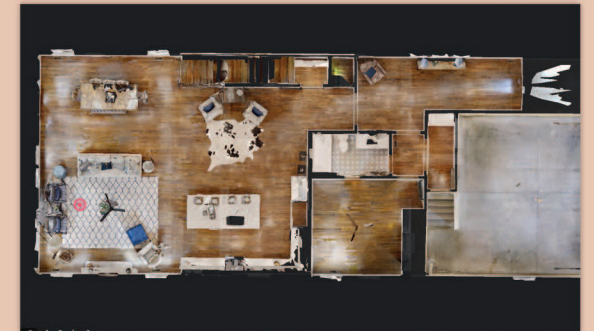

# As-Built Drawings

As-Built drawings are traditionally a pain point in the AEC industry. Whether for renovation, audit, insurance purposes, we can create these drawings and 3D models for just about any property. Using LiDAR technology combined with 360 photography, we can reverse engineer as built drawings. Need something quick and simple? We have that option. Wanting something more millimeter accurate? We have tools for that as well.

# Digital Twins / Matterport

We are proud to offer Digital Twin and Matterport tours. Matterport tours are especially helpful for properties that "you just have to be there" to understand. Tours allow the users to be immersed in the property like a first-person video game. Within the tours a user can walk around and see exactly how spaces are interconnected.

# Drone / Aerial

Taking the world by air inexpensively has been a luxury we have only had for a few meaningful years. Scan Skunks is qualified and certified by the FAA and IACRA to professionally scan and photograph your property from the sky. When there is no substitute for getting up in the air to understand a property, we make it simple.

# Clients

# Testimonials

As an architect in practice 40+ years, as-built documentation is often difficult, time-consuming, and frustrating. Working with Scan Skunks, I now no longer have the burden for this important activity as they provide all my as-built needs, providing superb service, in a timely manner, and at a very reasonable price. Residential or commercial work, Andy & his team handles it all!

W. Michael Davis, Architect

Our firm has worked with Andy for many years and the quality of work and service that Scan Skunks delivers for each project has exceeded our expectations for a surveying service. We will continue to use Scan Skunks on future renovation projects.

Daniel J. Waterman, designONE studio

When starting any new project Scan Skunks are our first call. The team is always ready to scan. Prompt, punctual and professional.

John Moores, Architect

For such a challenging and detailed set of existing conditions it was a no-brainer to get Andy and his team to help us out. We were under a tight time constraint and they were awesome getting on site immediately and providing both images and a Revit file in a timely manner to keep us on schedule. We showed the client the virtual walk-through and they were blown away. This will be a HUGELY important asset to the design team as we do detailed deep dives on individual spaces, crafting design solutions that will respect the existing historic structure. There's just no substitute for images of EVERYTHING. A great crew to work with and they deliver.

Brandon Priddy, 906 Studio Architects
